dheeraj-sanotra.github.io/portfolio

Ghaziabad, Uttar Pradesh, India

CORE COMPETENCIES

Backend Architecture • Node.js & Express.js • REST API Design • SaaS Product Engineering • Payment Infrastructure • Marketplace Integrations • Authentication & Security • Queue Processing • DevOps & CI/CD • Performance Optimization • Cloud Infrastructure

TECHNICAL SKILLS

Languages & Frameworks

Node.js, Express.js, PHP, Laravel, JavaScript, CodeIgniter

Databases

MySQL, MongoDB, Redis

Cloud & DevOps

AWS S3, CloudFront, CloudWatch, CodeBuild, Secrets Manager, Docker, Bitrise, Bitbucket Pipelines, Fastlane

Payments

Stripe, Paddle, Razorpay, Apple IAP, Google Play Billing, Zoho

Auth & Security

JWT, OAuth2, OneLogin SSO, Twilio Verify (TOTP), Firebase Auth

Notifications

Firebase FCM, OneSignal, Twilio, Transactional Email

Integrations

Shopify, WooCommerce, Stack Commerce, AppSumo, In-App Purchase

Monitoring

Sentry, CloudWatch, Git, Bitbucket

EDUCATION

B.Tech – Computer Science

Trident Group of Institutions
2014 – 2018

Senior & Secondary Education

Dehradun Public School
2012 – 2014

Senior Development Engineer (SDE-III) with **8+ years** designing and scaling SaaS backend systems. Specialist in **Node.js, Laravel**, and distributed API architecture. Built and scaled backends serving **800K+ users**, powering **500K+ mobile apps** with **100M+ cumulative downloads**. Deep expertise in payment infrastructure, marketplace ecosystem development, cloud engineering, and build automation. Owns systems end-to-end — from architecture to production reliability.

PROFESSIONAL EXPERIENCE

WishACloud Pvt. Ltd. / WishACloud INC. (SaaS Mobile App Builder)

Jun 2019 – Present | Remote | Platform serving 800K+ users • 500K+ apps built • 100M+ downloads

Senior Development Engineer (SDE-III) – Independent Contractor

Mar 2026 – Present

Senior Development Engineer (SDE-III)

Jan 2025 – Feb 2026

Senior Software Developer

Jan 2023 – Dec 2024

Software Developer

Jan 2022 – Dec 2022

Associate Software Developer

Jun 2019 – Dec 2021

CORE CONTRIBUTIONS

Backend Engineering & Node.js Migration

- Architected and sustained **1000+ production REST APIs** supporting mobile, dashboard, and partner clients using Node.js, Express.js, Laravel, MySQL, MongoDB, and Redis.
- Led migration of high-concurrency mobile APIs from Laravel to Node.js, achieving **100–300 ms response times** and significantly improving scalability under peak load.
- Implemented queue-driven background processing to decouple heavy workloads from API response paths, reducing latency and improving system throughput.
- Refined MySQL and MongoDB data models using indexing, aggregation pipelines, and transactional workflows, reducing average query latency by **40%**.

Payment Infrastructure

- Engineered **subscription billing systems** integrating Stripe, Paddle, Razorpay, Zoho, Apple IAP, and Google Play Billing across checkout, webhooks, retries, coupons, taxation, invoicing, refunds, and multi-currency payment processes.
- Strengthened subscription reliability for global SaaS customers through resilient billing routines, 3-tier webhook validation, programmatic exponential backoff retry paths, and multi-layer payment recovery processes — reducing involuntary churn risk across Stripe, Paddle, and Razorpay integrations.

Marketplace Platform Ecosystem

- Unified **Shopify, WooCommerce, WooCommerce Marketplace, Stack Commerce, and AppSumo** networks through OAuth, webhooks, subscription synchronization, and asynchronous cron driven background workloads.
- Linked over **30+ third-party API implementations** — spanning **payments, commerce, authentication, cloud, monitoring, and automation** — into a single cohesive platform backend.
- Orchestrated a multi-vendor commerce service featuring strict multi-tenant isolation, concurrent inventory locks handling hundreds of real-time updates, high-throughput order lifecycles, structured Razorpay settlements, and transactional Firebase Cloud Messaging workflows across 4+ client types.
- Shipped a creator analytics tool — deploying YouTube Data API pipelines configured with quota-aware Redis caching, periodic database snapshot routines for time-series historical retention, and an algorithmic SEO scoring engine evaluating 5+ metadata vectors for video discoverability.

Authentication & Security

- Implemented **production-grade authentication** using JWT, OAuth2, OneLogin SSO, Twilio Verify (TOTP), and Firebase Authentication with **RBAC and Redis rate limiting**, webhook verification, and backup recovery.

Build Automation & DevOps

- Established Android and iOS build and publishing automation using **AWS CodeBuild, Bitrise, and Fastlane**, cutting manual release effort by approximately **80%** and enabling scalable, consistent deployments.
- Configured CI/CD workflows via Bitrise, Bitbucket Pipelines, and Bash scripting; managed cloud infrastructure including AWS S3, CloudFront, CloudWatch, and Secrets Manager for deployment, storage, and monitoring.
- Oversaw Docker-based containerization and cloud environment configurations across multiple deployed applications.

Cloud & Performance Engineering

- Accelerated backend API performance through Redis caching, query tuning, database indexing, and asynchronous background job execution.
- Led the live database transition from MySQL to MongoDB by writing migration scripts, validating data integrity, and resolving post-cutover edge cases.
- Resolved a live data integrity issue caused by concurrent duplicate ID collision — introduced transactions, controlled identifier logic, and record reconciliation.

Notification & Real-Time Systems

- Embedded Firebase Cloud Messaging, OneSignal, and Twilio protocols for push, SMS, and transactional notifications with scheduling, segmentation, retry handling, and delivery monitoring.
- Built real-time communication infrastructure using WebSockets and Pusher for live, personalized user experiences at scale.

Technical Leadership & Custom Product Capabilities

- Directed backend architecture discussions, release planning, and cross-functional coordination across independent release cycles, minimizing deployment issues to maintain a 99.9% uptime target.
- Architected and shipped dynamic pricing models, multi-locale translation engines, Progressive Web App (PWA) architectures, and modular custom layout builders from proof-of-concept to production deployment.

KEY ACHIEVEMENTS

- **800K+ Users Served** — Backend systems powering a platform used by global businesses, universities, media and enterprise organizations.
- **500K+ Mobile Apps & 100M+ Downloads** — Contributed to backend infrastructure enabling large-scale app provisioning.
- **1000+ REST APIs** — Architected and sustained production API surface across mobile, web, and external services.
- **~80% Release Effort Reduction** — Android & iOS build automation via AWS CodeBuild, Bitrise, and Fastlane eliminated manual publishing steps.
- **Node.js Migration** — Migrated high-concurrency APIs from Laravel to Node.js; response times reduced to **100–300 ms**.
- **30+ Third-Party Services** — Payments, commerce, auth, cloud, and automation platforms unified across multiple SaaS products.
- **Production Database Migration (MySQL → MongoDB)** — Successfully executed production database migration with minimal disruption.
- **Production Concurrency Resolution** — Eliminated duplicate-ID concurrency issue using transactions and controlled identifier assignment.

PROFESSIONAL EXPERIENCE

Addysan Innovations Pvt. Ltd.

Feb 2018 – May 2019 | Noida, India | Software Development & IT Services

Junior Software Developer

Aug 2018 – May 2019

Software Intern

Feb 2018 – Jul 2018

- Modernized a legacy Ed-Tech platform for a STEM franchise across **25+ locations** in Canada and USA serving **50K+ students** — re-architected the **CodeIgniter** codebase and built **multi-location scheduling, LMS, franchise admin reporting**, and competition management for FLL/WRO leagues.
- Developed an **enterprise trade operations infrastructure** managing end-to-end multi-role approval workflows, purchase order lifecycles, global shipment tracking, programmatic trade document compile engines, and granular **role-based access control (RBAC)**.
- Delivered an internal HRMS covering employee records administration, attendance, leave tracking, payroll processing, and instant payslip compilation while extending existing modules.

Apex TGI

Jun 2017 – Nov 2017 | Noida, India

Internship Trainee

Jun 2017 – Nov 2017

- Engineered a full-stack, relational E-Commerce application utilizing modular PHP backend architecture featuring **15+ database tables**, optimized schema design, dynamic frontend data rendering, and structured relational state management.

PROJECTS DELIVERED

AppMySite | SAAS · LIVE

WishACloud Pvt. Ltd. · Jun 2019 – Present · [appmysite.com](#)

No-code SaaS enabling 800K+ users across 150+ countries to build native iOS and Android apps from WordPress, WooCommerce, Shopify, and custom websites. Core backend contributor responsible for APIs, payments, integrations, build automation (AWS CodeBuild, Bitrise, Fastlane), and cloud infrastructure.

MoShoppa | E-COMMERCE · OFFLINE

WishACloud Pvt. Ltd.

B2B2C multi-vendor commerce platform enabling isolated storefronts on shared infrastructure with vendor onboarding, inventory management, order processing, Razorpay settlements, and Firebase push notifications.

Vudini (VideoRankMe) | CREATOR TOOLS · OFFLINE

WishACloud Pvt. Ltd.

YouTube SEO and channel analytics SaaS for creators — keyword research, tag analysis, and competitor benchmarking. Constructed YouTube Data API pipelines, daily snapshot system for trend monitoring, Redis quota management, and algorithmic SEO scoring.

Zebra Robotics | EDTECH · LIVE

Addysan Innovations Pvt. Ltd. · [zebrarobotics.com](#)

Platform for a STEM franchise across 25+ locations in Canada and USA, serving 50K+ students. Produced enrollment portals, multi-location scheduling, LMS, franchise reporting, FLL/WRO competition management, and Stripe payments.

Connect Export | ENTERPRISE · PRIVATE

Addysan Innovations Pvt. Ltd.

Trade operations platform digitalizing export and import workflows — vendor management, purchase order lifecycle, shipment tracking, standardized document formatting for invoices and packing lists, and RBAC for admin, operations, and finance teams.

HR Management System | ENTERPRISE · INTERNAL

Addysan Innovations Pvt. Ltd.

Internal HRMS covering employee records, attendance, leave management, payroll processing, and PDF payslip generation — deployed for day-to-day HR operations.
