dheeraj-sanotra.github.io/portfolio

Ghaziabad, Uttar Pradesh, India

CORE COMPETENCIES

Backend Architecture • Node.js & Express.js • REST API Design • SaaS Product Engineering • Payment Infrastructure • Marketplace Integrations • Authentication & Security • Queue Processing • DevOps & CI/CD • Performance Optimization • Cloud Infrastructure

TECHNICAL SKILLS

Languages & Frameworks

Node.js, Express.js, PHP, Laravel, JavaScript, CodeIgniter

Databases

MySQL, MongoDB, Redis

Cloud & DevOps

AWS S3, CloudFront, CloudWatch, CodeBuild, Secrets Manager, Docker, Bitbucket Pipelines, Fastlane

Payments

Stripe, Paddle, Razorpay, Apple IAP, Google Play Billing, Zoho

Auth & Security

JWT, OAuth2, OneLogin SSO, Twilio Verify (TOTP), Firebase Auth

Notifications

Firebase FCM, OneSignal, Twilio, Transactional Email

Integrations

Shopify, WooCommerce, Stack Commerce, AppSumo, In-App Purchase

Monitoring

Sentry, CloudWatch, Git, Bitbucket

EDUCATION

B.Tech – Computer Science

Trident Group of Institutions
2014 – 2018

Senior & Secondary Education

Dehradun Public School
2012 – 2014

Senior Development Engineer (SDE-III) with **8+ years** designing and scaling SaaS backend systems. Specialist in **Node.js, Laravel**, and distributed API architecture. Built and scaled backends serving **800K+ users**, powering **500K+ mobile apps** with **100M+ cumulative downloads**. Deep expertise in payment infrastructure, marketplace ecosystem development, cloud engineering, and build automation. Owns systems end-to-end — from architecture to production reliability.

PROFESSIONAL EXPERIENCE

WishACloud Pvt. Ltd. / WishACloud INC. (SaaS Mobile App Builder)

Jun 2019 – Present | Remote | Platform serving 800K+ users • 500K+ apps generated • 100M+ downloads

Senior Development Engineer (SDE-III) – Independent Contractor

Mar 2026 – Present

Senior Development Engineer (SDE-III)

Jan 2025 – Feb 2026

Senior Software Developer

Jan 2023 – Dec 2024

Software Developer

Jan 2022 – Dec 2022

Associate Software Developer

Jun 2019 – Dec 2021

CORE CONTRIBUTIONS

⚡ Backend Engineering & Node.js Migration

- Architected and sustained **1000+ production REST APIs** supporting mobile, dashboard, and partner clients using Node.js, Express.js, Laravel, MySQL, MongoDB, and Redis.
- Led migration of high-concurrency mobile APIs from Laravel to Node.js, achieving **100–300 ms response times** and significantly improving scalability under peak load.
- Engineered queue-based background processing pipelines to decouple heavy workloads from API response paths, reducing latency and improving system throughput.
- Engineered and optimized scalable **MySQL** and **MongoDB** database schemas, implementing aggregation pipelines, indexing, and transactional workflows — cutting average query latency by over **40%** and improving backend scalability across **1000+ APIs**.

💰 Payment Infrastructure

- Built and upheld subscription systems connecting **Stripe, Paddle, Razorpay, Zoho, Apple IAP, and Google Play Billing** across checkout, webhook processing, retry logic, coupons, multi-currency, tax handling, invoice issuance, and refund workflows.
- Strengthened subscription reliability and improved international payment experience, supporting a global customer base across multiple SaaS products.

🔗 Marketplace Platform Ecosystem

- Delivered end-to-end API bridges with **Shopify, WooCommerce, WooCommerce Marketplace, Stack Commerce, and AppSumo** — covering OAuth, webhooks, product/customer/subscription sync, and scheduled background jobs.
- Unified **30+ third-party API implementations** — spanning payments, commerce, authentication, cloud, monitoring, and automation — into a single cohesive platform backend.

🔒 Authentication & Security

- Deployed production authentication supporting **JWT, OAuth2, OneLogin SSO, Twilio Verify (TOTP), and Firebase Auth** with QR enrollment, backup codes, role-based permissions, Redis rate limiting, and RSA webhook verification.

⚙️ Build Automation & DevOps

- Established Android and iOS build and publishing automation pipelines using **AWS CodeBuild and Fastlane**, reducing manual release effort by approximately **80%** and enabling scalable, consistent deployments.
- Built CI/CD workflows via Bitbucket Pipelines and Bash scripting; managed cloud infrastructure including AWS S3, CloudFront, CloudWatch, and Secrets Manager for deployment, storage, and monitoring.
- Worked on Docker-based containerization and managed cloud infrastructure configurations across multiple production applications.

🌐 Cloud & Performance Engineering

- Optimized backend API performance through Redis caching, query optimization, database indexing, and asynchronous background job processing.
- Participated in production migration from **MySQL to MongoDB** — authored migration scripts, validated data consistency, and addressed post-migration edge cases with minimal disruption.
- Fixed a production data integrity issue caused by concurrent duplicate ID collision — introduced transactions, controlled identifier logic, and record reconciliation.

💡 Notification & Real-Time Systems

- Configured **Firebase Cloud Messaging, OneSignal, and Twilio** for push, SMS, and transactional notifications with scheduling, segmentation, retry logic, and delivery monitoring.
- Built real-time communication infrastructure using WebSockets and Pusher for live, personalized user experiences at scale.

✂️ Technical Leadership & Custom Product Capabilities

- Led backend architecture discussions, production releases, and cross-functional planning across multiple concurrent products, improving delivery consistency and reducing production issues.
- Built a dynamic pricing engine, translation and localization modules, custom layout builder, and Progressive Web App (PWA) capabilities — all from scratch, production-ready.

KEY ACHIEVEMENTS

- ▶ **800K+ Users Served** — Backend systems powering a platform used by global businesses, universities, media and enterprise organizations.
- ▶ **500K+ Mobile Apps & 100M+ Downloads** — Contributed to backend infrastructure enabling app creation at scale.
- ▶ **1000+ REST APIs** — Architected and sustained production API surface across mobile, web, and external services.
- ▶ **~80% Release Effort Reduction** — Android & iOS build automation via AWS CodeBuild and Fastlane eliminated manual publishing steps.
- ▶ **Node.js Migration** — Migrated high-concurrency APIs from Laravel to Node.js; response times reduced to **100–300 ms**.
- ▶ **30+ Third-Party Services** — Payments, commerce, auth, cloud, and automation platforms unified across multiple SaaS products.
- ▶ **MySQL → MongoDB Migration** — Successfully executed production database migration with minimal disruption.
- ▶ **Production Data Integrity** — Eliminated duplicate-ID concurrency issue using transactions and controlled identifier assignment.

PROFESSIONAL EXPERIENCE

Addysan Innovations Pvt. Ltd.

Feb 2018 – May 2019 | Noida, India | Software Development & IT Services

Junior Software Developer

Aug 2018 – May 2019

Software Intern

Feb 2018 – Jul 2018

- Rebuilt a legacy platform for a US-based Robotics Institute using Codelgniter, modernizing **10+ core modules** and improving long-term maintainability.
- Developed and launched an HR Management System; extended and enhanced Laravel applications through bug fixes, module enhancements, and performance improvements.

Apex TGI

Jun 2017 – Nov 2017 | Noida, India

Internship Trainee

Jun 2017 – Nov 2017

- Built foundational skills in HTML, CSS, Bootstrap, JavaScript, jQuery, and PHP through an E-Commerce practice project — establishing a strong software development foundation.
